

Some useful commands in Git:-

- ① To see all the remotes and their aliases in local repository
⇒ `git remote -v` ↵
- ② To see all the branches of a repository
⇒ `git branch -a` ↵
- ③ To add new remote in your local repository
⇒ `git remote add alias-name url` ↵
- ④ To delete an alias of a local repository
⇒ `git remote rm alias-name` ↵
or
⇒ `git remote remove alias-name` ↵ // rarely used
- ⑤ Deleting a branch from your repository
⇒ `git branch -D branch-name` ↵ // less useful
- ⑥ Creating a branch from a source -
⇒ `git branch new-branch-name source-reference` ↵

where source-reference can be any commit hash
or any other branch name
- ⑦ Create and checkout a new branch :-
⇒ `git checkout -b new-br-name source-reference` ↵
